

Enterprise-grade cloud infrastructure on your terms.

Full control. No surprises.

Modern workloads deserve a cloud foundation that's fast, predictable, and easy to operate — without the noise, complexity, or unexpected bills that often come with hyperscalers. Worldstream Flexible Cloud gives you exactly that: a solid, VMware Cloud Foundation powered software defined data center (SDDC) you can rely on, built for teams that want enterprise performance and full control.

Common Challenges

Organizations running modern, virtualized, or business-critical workloads face recurring infrastructure challenges that slow them down:

- | | |
|--|--|
| <ul style="list-style-type: none">• Unpredictable cloud bills and complex pricing models | <ul style="list-style-type: none">• High availability and compliance requirements |
| <ul style="list-style-type: none">• Growing infrastructure and operational complexity | <ul style="list-style-type: none">• Licensing overhead for Microsoft workloads |
| <ul style="list-style-type: none">• Long deployment times for new environments | <ul style="list-style-type: none">• Scalability limitations requiring major re-architecting |
| <ul style="list-style-type: none">• Performance bottlenecks in legacy or oversold platforms | <ul style="list-style-type: none">• Increased risk exposure from downtime or instability |

Business impact

These challenges translate directly into business pressure:

- | | |
|--|--|
| <ul style="list-style-type: none">• Higher TCO and poor budget predictability | <ul style="list-style-type: none">• Compliance complexity and administrative burden |
| <ul style="list-style-type: none">• Increased workload for IT teams | <ul style="list-style-type: none">• Higher dependency on vendors and technology constraints |
| <ul style="list-style-type: none">• Reduced agility and slower innovation | <ul style="list-style-type: none">• Infrastructure constraints that limit growth |
| <ul style="list-style-type: none">• Higher risk of outages and degraded performance | <ul style="list-style-type: none">• Delayed time-to-market and limited ability to scale |

The Solution?

Worldstream Flexible Cloud

Flexible Cloud is a fully software-defined datacenter (SDDC) built on VMware Cloud Foundation — delivering enterprise performance, scalability, and reliability in a platform that stays simple, transparent, and under your control.

No hidden fees. No vendor lock-ins. No surprises. Just Solid IT.

What flexible cloud does – and why it matters

	What it means	What you gain
Predictable pay-per-use model	Transparent, metered billing without IOPS, traffic, or firewall charges.	Cost predictability and full budget control. No surprises, no hidden consumption fees.
VMware Cloud Foundation SDDC	Enterprise-grade vSphere, NSX-T, vSAN stack following the latest VCF standards.	Enterprise reliability without hyperscale complexity — trusted technology, simplified.
High-performance architecture	All-flash NVMe, modern vSAN, automated HA features (vMotion, DRS, failover).	Consistent, ultra-fast performance and maximum uptime for critical workloads.
VMware Cloud Director control plane	Self-service provisioning, networking, scaling, and lifecycle management.	Full operational control — deploy and adjust environments instantly, without bottlenecks.
Hardened and maintained infrastructure	Worldstream manages and secures the entire foundational layer.	Less operational overhead — your team focuses on workloads, not infrastructure maintenance.
Premium EVPN/VXLAN network fabric	High-throughput, low-latency network engineered for stable workload performance.	Reliable connectivity and predictable performance, ideal for hybrid and distributed setups.

Use cases

Virtualization & application hosting

Run VMs, containers, SaaS platforms, APIs, and business applications.

Solves:

hardware complexity, slow deployments, inconsistent performance.

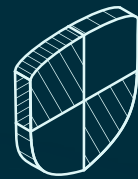

Scalable business workloads

Run ERP systems, internal tools, customer portals, and data-driven applications with predictable performance.

Solves:

overprovisioning, rising cloud costs, limited scalability for growing workloads.

Flexible & cost-efficient cloud operations

Deploy and manage workloads that scale up or down with demand, without paying for unPS zeused peak capacity.

Solves:

unpredictable OPEX, complex cloud management, inefficient resource utilization.

Pricing overview

Pay-per-use

Resources

• Flexible Cloud vCPU	€	6,95
• Flexible Cloud vRAM (per TB)	€	3,95
• Flexible Cloud vStorage (per TB)	€	80,00
• Backup Storage (per TB)	€	25,00
• Public IP address	€	2,50

**All prices per month, excluding VAT.*

Licenses

• Backup license per VM	€	10,00
• Windows Server OS per VM	€	25,00
• Office Access	€	6,27
• Office Standard	€	16,05
• SQL Server Enterprise Core	€	627,04
• SQL Server Standard SAL	€	18,38
• SQL Server Standard Core	€	170,02
• SQL Server Web Core	€	10,64
• Windows Server Remote Desktop Services SAL	€	7,52

**All prices per month, excluding VAT.*

Billing logic

• Usage monitored multiple times per hour
• Clear monthly pricing for vCPU, vRAM, vStorage and Backup Storage based on the amount of days the resources were active
• Licenses billed on monthly peak usage
• No charges for IOPS, traffic or firewall rules

Straightforward and
predictable. Exactly how
cloud billing should be.

Technical Specifications

Our service is delivered with a 99.99% SLA, ensuring consistent availability and reliability for business-critical operations.

Storage

- All-flash NVMe
- Latest vSAN architecture

Network

- Premium network with EVPN/VXLAN
- One central environment

Platform

- VMware Cloud Foundation
- VMware vSphere
- VMware NSX-T
- VMware vSAN

Management & Licensing

- VMware Cloud Director portal
- Windows Server and SQL Server licensing (SAL or per-core)
- Octopus License Agent included in Windows templates (no personal data collected)

Get started

Want to simplify your cloud operations and build on a solid, high-performance foundation?

Request a consultation, pricing estimate, or live demo. No surprises, Just Solid IT.
