

Scalable storage for everything that keeps your business running.

Your data, backups, and applications grow every day. Traditional storage can't keep up. It brings cost, complexity, and risk along with it. Worldstream Object Storage gives you a reliable, European storage layer that scales with your business.

No vendor lock-in. No surprise bills. Just Solid IT.

Common challenges

Storage becomes a problem before you see it coming. Growing organizations deal with growing data. Scalability, security, and compliance don't wait. Most storage platforms weren't built to handle all three.

- **Unplanned capacity growth:** you're constantly buying more, migrating, or overprovisioning. It costs time and erodes budget.
- **Vendor lock-in:** you're tied to one hyperscaler: their pricing, their terms, their infrastructure.
- **Unclear data location:** you don't know exactly where your data sits. Regulators are starting to ask.
- **Complex integrations:** every new backup tool or application needs its own connector and management layer.
- **Unexpected costs:** egress fees, API call charges, opaque tiers. The invoice is never what you expected.
- **Single-location risk:** one incident, one location, one point of failure. For your operations and everyone who depends on them.

Business impact

What it costs you when things go wrong. Infrastructure problems become business problems fast. Here's what poor storage decisions cost you in practice.

- **Service disruptions:** teams and end users experience downtime the moment you hit capacity limits or a location fails.
- **Compliance exposure:** data stored outside Europe, or without a documented location, makes GDPR audits costly and uncomfortable.
- **Budget pressure:** unpredictable storage costs make it harder to plan and harder to justify infrastructure spend.
- **Operational overhead:** self-managed storage consumes engineering capacity you'd rather spend on building and delivering.
- **Business continuity risk:** without geo-redundancy, a single failure can take down the data your operations depend on.

The Solution?

Worldstream Object Storage

Worldstream Object Storage is a fully managed, S3-compatible storage service built on geo-distributed European infrastructure. Data is encrypted and distributed across three physically separated locations. No single point of failure, no hyperscaler dependency.

Integrate it directly into your existing tools: Veeam, Commvault, AWS CLI, and more. Scale based on actual usage. Pay per TB.

Always know where your data is. Worldstream manages the infrastructure, monitoring, and compliance layer.

Your team works on what actually moves the business forward.

No lock-in. No hidden fees. Just Solid IT.

Features & how it works

What you get, and what it actually means for you.

Feature	What it means	What you gain
S3-compatible API	Fully compatible with the AWS S3 API standard	No migration of tools or code. Plug in and go.
Geo-distributed storage	Data spread across 3 physically separated datacenters	No single point of failure. Data stays accessible even when a location goes down.
AES-256 end-to-end encryption	Data encrypted in transit and at rest	Only you can access your data. Zero-knowledge architecture.
European data sovereignty	Data stored exclusively in European datacenters. ISO 9001 & 27001 certified	GDPR-compliant out of the box. No extra effort required.
Horizontal scalability	Capacity grows seamlessly as your needs increase, with no service disruption	Pay for what you use. No overprovisioning, no capacity planning headaches.
Fully managed service	Worldstream handles infrastructure, updates, and monitoring	No operational overhead. You focus on your business.
Broad tool compatibility	Works with Veeam, Commvault, Nakivo, Acronis, AWS CLI, rclone, Cloudflare and more	Fits straight into your existing environment without rework.
Lifecycle management	Automate object deletion, archiving, or tiering based on rules	Less manual work, lower long-term storage costs.

Use cases

What organizations use Worldstream Object Storage for.

Backup & archiving	A secure, durable storage layer for backups, snapshots, and long-term retention. Compatible with Veeam, Acronis, Nakivo, and Commvault.
Disaster recovery	Store data across multiple locations and guarantee availability. Even when one site goes down.
Compliance & data sovereignty	For organizations in healthcare, finance, or the public sector: demonstrably European storage with ISO 9001 & 27001 certification.
Data lakes & analytics	A central storage layer for unstructured data used in BI, AI, and ML pipelines.
Media & content storage	Store large media files and deliver them reliably to applications and platforms at scale.
Logging & monitoring data	Retain logs, metrics, and telemetry securely and at scale. For troubleshooting and compliance reporting.

Transparent pricing

What you agree today is what appears on your invoice.

Tier	Price per TB / month	Ideal for
Standard (1-AZ)	€9,- / TB	Backup, archiving, internal datastores
GEO Distributed (3-AZ)	€14,- / TB	Compliance, disaster recovery, production data

Volume discounts available. Committing to 50TB or more? We offer additional discounts based on volume.
