

Worldstream Flexible VPS

No egress traps No support black holes.

Self-service KVM-based cloud servers in our own European Tier 3 datacenters. Provision in seconds, manage the full lifecycle from one portal, and reach senior engineers when you need them.

No egress traps. No support black holes. Just Solid IT.

Common Challenges

The hyperscaler middle ground is no longer comfortable for most teams.

- **Pricing complexity.** Bills priced across a dozen dimensions. Impossible to forecast.
- **Egress traps.** Cheap to put data in. Expensive to take it out.
- **Sovereignty pressure.** Customers and regulators want EU residency in plain language.
- **Support distance.** Chatbots and ticket queues that don't actually fix anything.
- **Operational drift.** Cloud accounts nobody fully understands anymore.

Business impact

What that costs your team and your business, every month.

- **Forecasting risk.** Budget overruns and end-of-quarter surprises.
- **Stalled deals.** Sales cycles slowed by data-residency questions.
- **Wasted hours.** Engineers troubleshooting cloud bills, not building features.
- **Outage anxiety.** Slower recovery when support is impersonal.
- **Compliance gaps.** Hard answers when an auditor asks where the data sleeps.

The Solution?

Worldstream Flexible VPS

Self-service KVM-based cloud servers in our own European Tier 3 datacenters. Provision in seconds, manage the full lifecycle from one portal, and reach senior engineers when you need them.

No egress traps. No support black holes. Just Solid IT.

	What it means	What you gain
Self-service in seconds	Provision Linux or Windows from a curated catalogue. Cloud-init, SSH-key import (incl. GitHub / GitLab).	Time to first deploy: under a minute.
Full lifecycle management	Snapshots, scheduled backups, multi-disk, multi-NIC, ISO mount, plan upgrades, browser noVNC console.	Everything in one portal. No external tools.
Networks and firewalls	Public IPs, private networks, managed firewall with DNAT, DHCP and VPN integration, reserved IPs, reverse DNS.	Real topologies, not screenshot diagrams.
Predictable pricing	Per-VM monthly. Traffic included. No egress traps.	A bill you can defend to your CFO.
EU sovereignty	Worldstream-owned EU datacenters. ISO 9001, ISO 27001, PCI-DSS.	Easy answers in procurement and audits.
24/7 senior engineers	Real engineers run the platform and answer your tickets.	Fixes in minutes, not deflections in hours.

Use cases

Web apps and APIs	Run LAMP, MEAN, Django, Rails, Node on consistent, defended cloud servers.
Dev, test, and CI	Spin up short-lived environments. Tear them down. Pay for what you used.
Microservices and small databases	Run service tiers and replicated PostgreSQL, MySQL, or Redis.
Foundation for Kubernetes	The same cloud powers your VMs, your clusters, and your private network.
EU-residency workloads	Stable home for the workloads that need to live in the EU. No maps required.

Pricing overview

Unit price calculation: Entry Standard

Plan	VCPU	RAM	DISK	PRICE / MO	
VPS x-Small	1	2 GB	40 GB	€	5,19
VPS Small	2	4 GB	80 GB	€	10,39
VPS Medium	4	8 GB	160 GB	€	20,77
VPS Large	6	12 GB	240 GB	€	31,16
VPS x-Large	8	16 GB	320 GB	€	41,55

We offer VPS shirt sizes as a starting point, giving you full freedom to scale resources up or down to match your exact needs.

Add-ons

All prices excl. VAT · per month

Add-on	Entry Standard
Initial IP	Free + FW IP
Extra IPv4	€3.50
Backups / GB	€0.05 /GB
Snapshots / GB	€0.067 /GB
Extra storage / GB	€0.067
Firewall	Included
Local network	Included
Traffic	Included

Initial IP and firewall IP included free. All prices excl. VAT.

Get started

Ready to go? Configure and deploy your first Flexible VPS in under a minute at worldstream.com. Prefer to talk first? A senior engineer is available to walk you through configuration, migration, or pricing. No commitment needed.
